

Remote Eyes® Enterprise Dashboard Online Service™

The Remote Eyes Enterprise Dashboard Online Service gives you unparalleled control over your digital video camera network. By using the Dashboard's Status Monitor, you will have peace of mind that your camera network is functioning normally and recording properly. And for retailers, the Dashboard's advanced Retail Monitor places the information you need to run your enterprise at your fingertips.

Monitor Your Camera Network

Your business has a dozen locations throughout the state. Without visiting each store, how can you be sure that your camera network is functioning normally?

The Remote Eyes Enterprise Dashboard Online Service allows you to monitor your camera network's performance from the convenience of your office or from the road. Simply log into the Dashboard to see all of your locations in an easy to read display format.

Reduce Loss Due to Employee Theft

Half of all retail loss is due to employee theft. The Dashboard's Retail Monitor gives you the tools you need to drill directly to the source of your losses. The Dashboard flags exceptional activity using either common register codes (e.g. NO SALE, VOID) or custom codes that Odyssey configures into the Dashboard at your request so you can manage your business on your own terms.

Maximize Labor Productivity

Would it give you a competitive advantage to be able to predict how many customers you will have at 9 a.m. and plan your staffing accordingly?

Maximize your ability to respond to customer demand while minimizing your exposure to wasted labor hours due to overstaffing. The Dashboard's Retail Monitor gives you the historical and real-time customer traffic data you need to optimize your labor shift scheduling.

Monitor Store Performance

How do your downtown stores perform when compared to your suburban stores?

With the Dashboard's Retail Monitor, you can review relative performance for all stores in your portfolio at a glance. No need to look at each store individually or, worse, travel to the store to use the in-store processor. All data is conveniently available on your desktop Web browser or your wireless handheld.

Product Features

- > Intuitive thin-client (Web browser) interface
- > Self-service setup and administration
- > Wireless handheld PDA support
- > Secure real-time network connectivity with Remote Eyes servers
- > 24x7 availability
